

Trimix Diver

These courses will give you the skills and knowledge needed to minimize the risks of utilizing helium-based Trimix breathing gas mixes.

In Trimix Level I, you'll learn to plan and execute technical dives that require stage decompression and utilize helium-based tri-mix breathing gas mixtures and EANx and/or oxygen for stage decompression to depths above 200 fsw / 61 msw.

In Trimix Level II, you'll learn how to safely extend your diving depths down to no greater than 250 fsw / 76 msw.

To enroll in either Trimix course, you must be certified as a NAUI Decompression Techniques Diver and Technical Helitrox Diver and have a minimum of 100 logged dives, 20 of which must have been decompression dives.
